

GREEN CAMPUS INITIATIVES

The college has initiated a series of green campus initiatives aimed at fostering sustainability and environmental awareness. Indoor green spaces have been established, creating areas of natural beauty within the campus environment. Furthermore, the college has undertaken the scientific naming of trees across the campus, enhancing biodiversity awareness and educational opportunities. Planting saplings is another integral part of the initiative, contributing to the expansion of greenery and the preservation of local ecosystems. Additionally, green campus awareness programs are regularly conducted to educate students and staff about sustainable practices and environmental conservation. To ensure accountability and progress, the college conducts regular audits of its green initiatives, monitoring and evaluating their effectiveness in reducing the institution's ecological footprint and promoting a culture of environmental responsibility. Through these concerted efforts, the college strives to create a more sustainable and environmentally conscious campus community.
